

Replit Clean Prompt (Copy/Paste Version)

Build a production-ready budget/ledger app.

REQUIREMENTS:

1. UI

- Modern, high-tech, dark fintech style
- Mobile-first, clean layout
- Remove all placeholder/junk data

2. FIREBASE

- Use Firebase Firestore for:
 - transactions
 - bills
 - months
 - rules
- Use Firebase Storage for file uploads
- Structure:
 - users/{userId}/months
 - users/{userId}/transactions
 - users/{userId}/bills
 - users/{userId}/rules

3. CORE FEATURES

- Monthly ledger system
- Bills + expenses tracking
- Add/edit/delete everything
- Running totals auto update
- Duplicate detection
- Review queue for imports

4. RULES ENGINE (REQUIRED)

Apply rules BEFORE saving transactions.

Rules:

- Pending = real money
- Must have date
- Categories fixed:
 - Bills, Fuel, Necessary, Medical, Shopping, Transfers, Personal, Waste
- Gas $\geq 15 \rightarrow$ Fuel
- Gas $< 15 \rightarrow$ Waste
- RentFlex = 1st & 21st
- Remove IRS + Verizon
- No duplicate entries
- Transfers not double counted
- Unmatched $\rightarrow$ send to review

Build:

- rules data model
- rules engine function
- rules settings UI
- test tool for rules

5. IMPORT SYSTEM

- CSV import (fully working)
- PDF/image upload (Firebase Storage)
- Preview before save
- Run rules engine on import
- Detect duplicates
- User confirms before saving

6. EXPORT

- Export CSV for current month
- Include all fields (date, name, amount, category)

7. ANALYTICS

- Category totals
- Bills total
- Waste total
- Medical total
- Monthly trends
- Bill pressure timeline

8. VERIFICATION FLOW

Import must go through:

parse → rules → duplicate check → preview → user confirm → save

9. FIX ALL BROKEN FEATURES

- Import button must work
- Export must work
- Analytics must work

10. OUTPUT

Return full working code for all changed files.

Explain what you fixed and why.
